# CHE-CO2 Human Emission Project (& its numbers)

## Aim:

Build European monitoring & verification support capacity for anthropogenic CO2 emissions

## How:

Monitoring/Verification System (MVS) driven by Earth observations, from remote sensing and in situ, combined with enhanced modelling systems, that includes CO2 fossil fuel emissions, along with other natural and anthropogenic CO2 emissions & transport.

## Why:

To support the Paris Climate Agreement and its implementation

## Project Duration:

**39 month**

## Project Funding:

**3.75 ME** (1.25 ME/year)

## Consortium Numbers

**22 partners** Institutes

## Work Content Numbers

**7 work-packages:**

5-Science development, 1-

International liaison,

1-Management & Coms

**7 Milestones**

**45 Deliverables**

**344.25 Person Month**

**(Eq 8.8 FTE)**

**3 Project Reviews**

**(M15, M27Tech, M39)**

CO<sub>2</sub> HUMAN EMISSIONS

# CHE Leadership and Expertise

**CHE leadership & expertise** ensure Monitoring of the project & its progress:

**WPL** in WP1 Corinne Le Quéré (UEA) and Wouter Peters (WAGENINGEN)

**WPL** in WP2 Dominik Brunner (EMPA) and Hugo Denier van der Gon (TNO)

**WPL** in WP3 Greet Maenhout (JRC) and Marko Scholze (LUND)

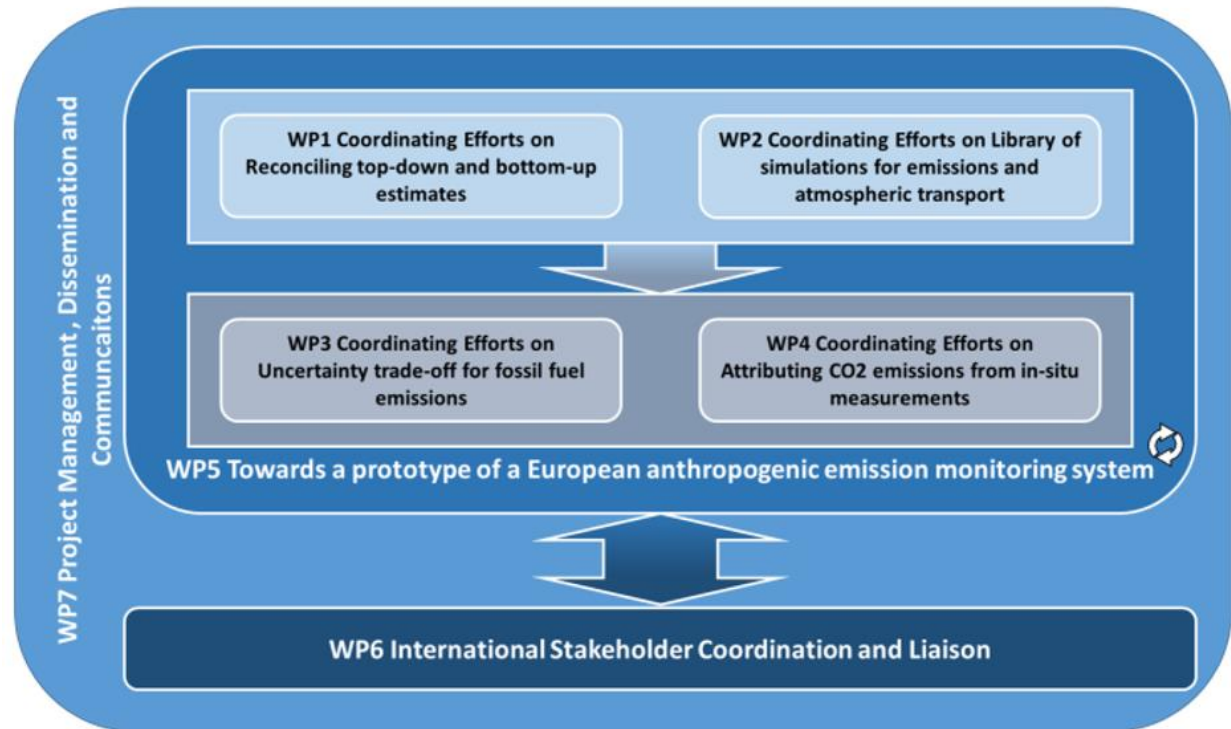

**WPL** in WP4 Frédéric Chevallier (LSCE) and Julia Marshall (MPI-BGC)

**WPL** in WP5 Anna Agusti-Panareda and Gianpaolo Balsamo (ECMWF)

**PIL** in WP6 Richard Engelen (ECMWF)

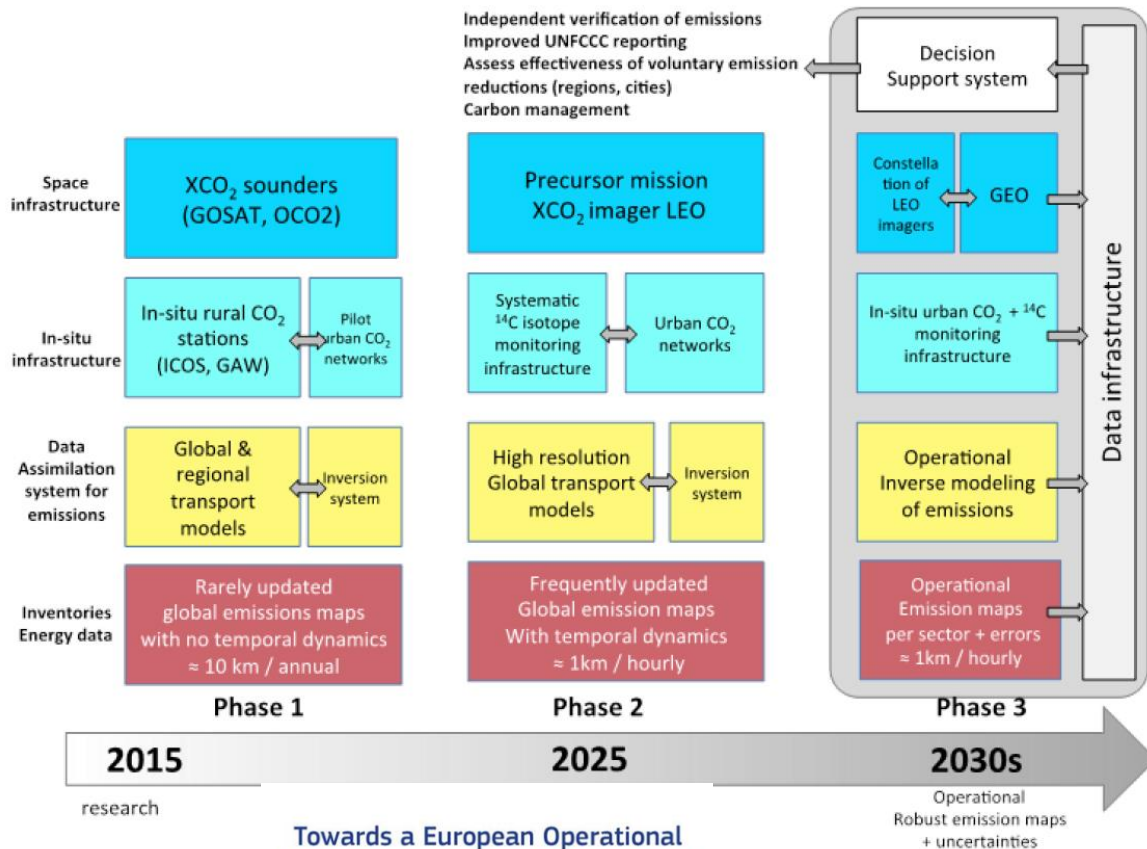

**PM** in WP7 Daniel Thiemert (ECMWF)

**COO** Gianpaolo Balsamo (ECMWF)

Work-Package Leaders (**WPL**), Project International Liaison (**PIL**), Project Manager (**PM**), Project Coordinator (**COO**)

# CHE Foundation: 2015 fossil CO2 monitoring and TFs report

Towards a European Operational Observing System to Monitor Fossil

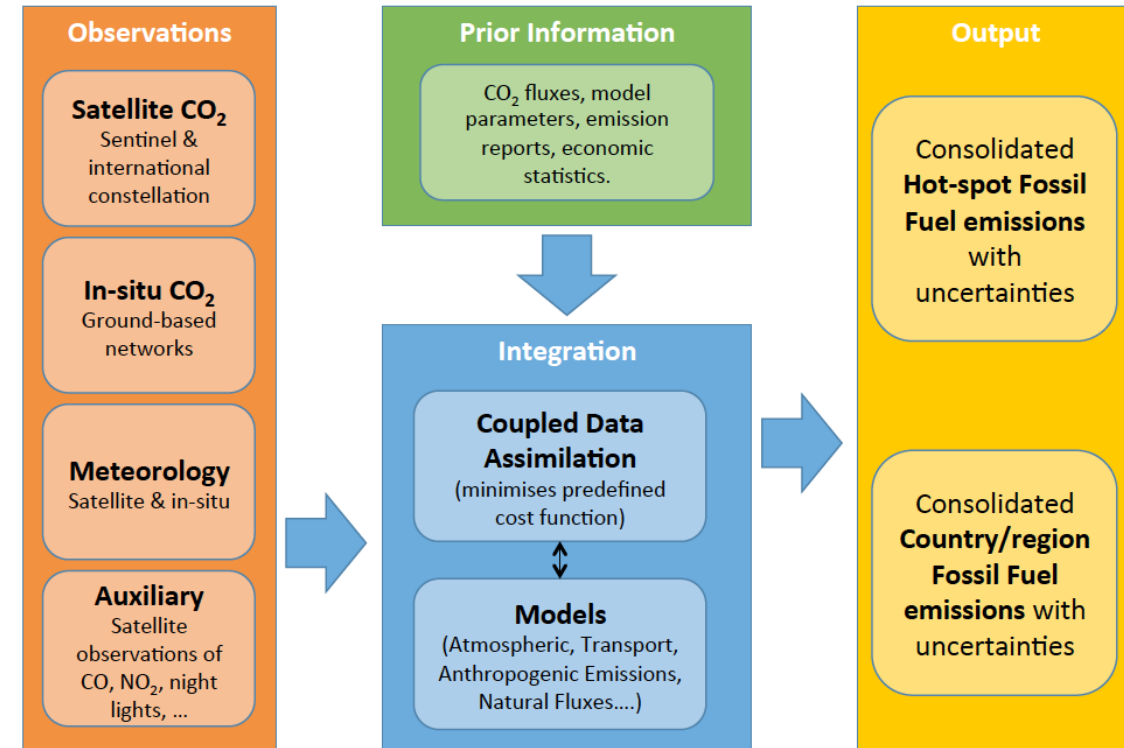

CO<sub>2</sub> emissions

CO<sub>2</sub> HUMAN

Final Report from the expert group

Recommended steps for implementation of a fossil CO<sub>2</sub> monitoring system

## From: 2017 CO<sub>2</sub> MTFB report

Pinty et al. (2017) An Operational Anthropogenic CO<sub>2</sub> Emissions Monitoring & Verification Support capacity - Baseline Requirements, Model Components and Functional Architecture, doi: 10.2760/08644, European Commission Joint Research Centre, EUR 28736 EN

### CHE WBS

**WP1** Coordinating Efforts on Reconciling top-down and bottom-up estimates, led by UEA 60.5 PM (39M, 1-39)

**WP2** Coordinating Efforts on Library of simulations for emissions and atmospheric transport, led by EMPA (64.5 PM)

**WP3** Coordinating Efforts on Uncertainty trade-off for fossil fuel emissions, led by ULUND (69.5PM)

**WP4** Coordinating Efforts on Attributing CO2 emissions from in-situ measurements, led by CEA (57.0 PM)

**WP5** Towards a prototype of a European anthropogenic emission monitoring system, led by ECMWF 55.25 PM (24M 15-39)

**WP6** International Stakeholder Coordination and Liaison, led by ECMWF (19.5 PM)

**WP7** Project Management, Dissemination and Communication, led by ECMWF (18.0 PM)

# CHE Connectivity & Stewardship

CHE Project steering is further ensured by the following roles:

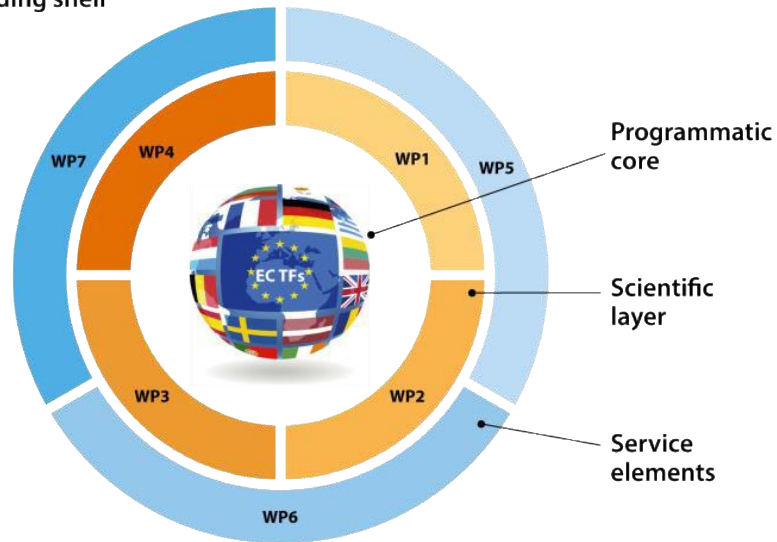

External Advisory Board (EAB) and External Expert Group (EEG)

EAB Han Dolman (Chair of EAB, VU NL), Pierre-Yves Le Traon (CMEMS, France), Mark Dowell (CLMS, INT), Sonia Seneviratne (ETH, Switzerland), Guy Brasseur (WCRP, Germany), Werner Kutsch (ICOS, Finland)

EEG Peter Rayner (Chair of EEG, U MELBOURNE, AU), Kevin Gurney (ARIZONA SU, US), Kevin Bowman (NASA JPL, US), Arlyn Andrews (NOAA, US), Pep Canadell (CSIRO, AU), Saroja Polavarapu (ECCC, Canada), Jing M. Chen (U NANJING, China, U TORONTO, Canada), Lu Daren (CAS, Tansat-PI, China), Chris O'Dell (CSU, US), Shamil Maksyutov (CGER/NIES, Japan), Paul Palmer (EDINBURGH, UK), Heather Graven (IMPERIAL, UK) Alex Vermeulen (Carbon Portal, Sweden)

# CHE: WP1-2-3-4 Overview

CHE capacity building shell

**WP1** Coordinating Efforts on **Reconciling** top-down and bottom-up estimates

**WP2** Coordinating Efforts on **Library of simulations** for emissions and atmospheric transport

**WP3** Coordinating Efforts on **Uncertainty trade-off** for fossil fuel emissions

**WP4** Coordinating Efforts on **Attributing** CO<sub>2</sub> emissions from in-situ measurements

# WP1: Reconciling top-down and bottom-up estimates

Lead: Wouter Peters/Maarten Krol (WU, Netherlands) Corinne LeQuere (UEA, United Kingdom)

Participants: UEA, ECMWF, ADS, SAS, ADS GMBH, EUMETSAT, iLAB,  
CEA, ULUND, TAS, UB, ULEIC, WU

## WP1 include

- Task 1.1: Deliver a cross section of remote-sensing data products needed in the data assimilation chain to constrain anthropogenic carbon emissions
- Task 1.2: Develop novel techniques to constrain anthropogenic and natural carbon emissions from joint surface and space-based carbon cycle data
- Task 1.3: Reconcile top-down and bottom-up carbon dioxide source/sink estimates at multiple levels of integration using a community access platform

- Task 1.4: Document current shortcomings and needed developments in space-based monitoring of fossil fuel CO<sub>2</sub> emissions

# WP2: Library of simulations - emissions & transport

Lead: Dominik Brunner (Empa) & Hugo Denier van der Gon (TNO)

Participants: DLR, ECMWF, JRC, MPG, SPASCIA, SRON, TNO

Generate library of realistic CO<sub>2</sub> forward simulations - “nature runs”

- Simulations for present-day and future emission scenarios
- From global to regional to point source scale
- Provide simulation input for other WPs

Support assessment of requirements for a future CO<sub>2</sub> space missions

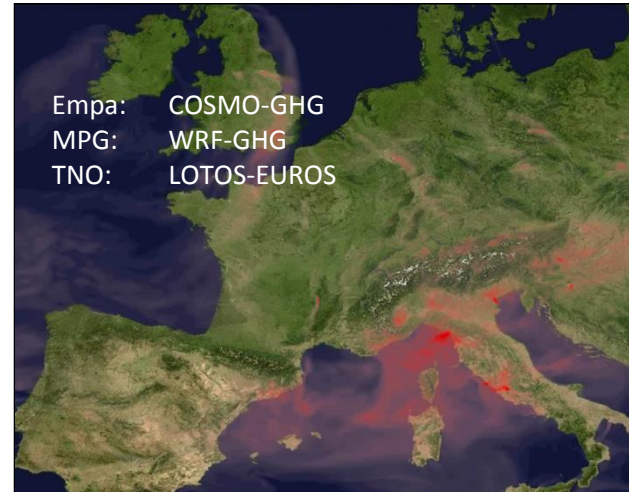

- Generate collection of synthetic satellite observations with realistic error characteristics, by combining model output with orbit simulations
- Investigate influence of aerosols on CO<sub>2</sub> retrieval in urban plume
- Investigate influence of small-scale and fluctuating nature of power plant plumes on capability to detect and quantify such plumes

# WP2: Embracing multi-scale, from local to global

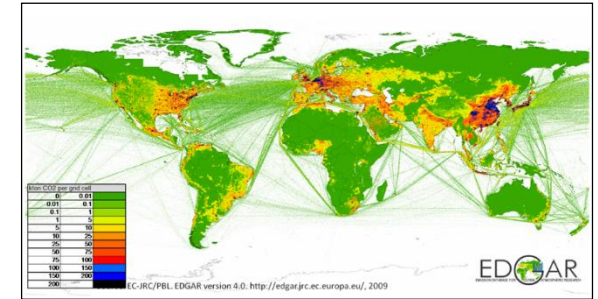

Global, ~ 9km resolution, ECMWF

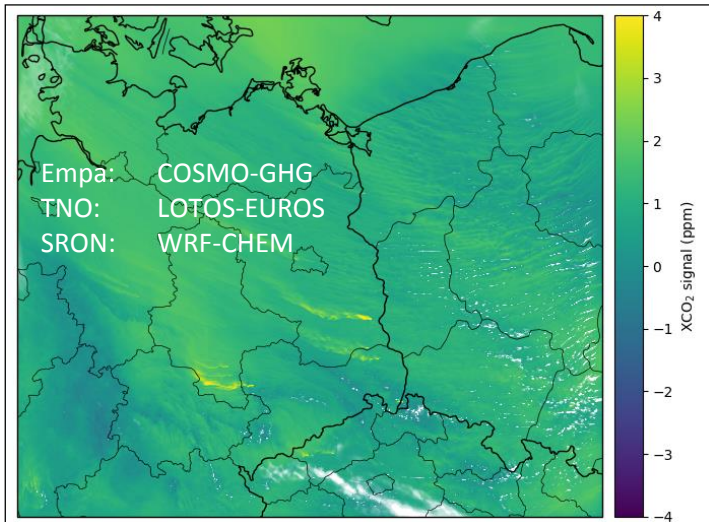

Europe, ~ 5 km, Empa, TNO, MPG

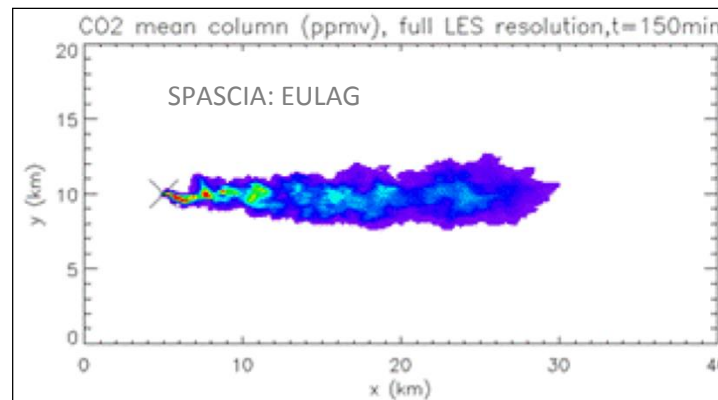

Global, Regional City emissions

Regional, ~ 1 km, Empa, TNO, SRON

Point source, ~ 100 m, SPASCIA

# WP3: Uncertainty trade-off - fossil fuel emissions

Lead: Marko Scholze (ULUND) and Greet Janssens-Maenhout (JRC)

Participants: ECMWF, CMCC, ULUND, iLab, JRC, KNMI, CEA-LSCE, MPG-BGC, TAS, TNO, UEA

Provide high-resolution (~km, hourly) prior biogenic fluxes with quantified uncertainties based on upscaling of eddy covariance flux measurements

Provide prior gridded anthropogenic emissions and their uncertainties and per sector

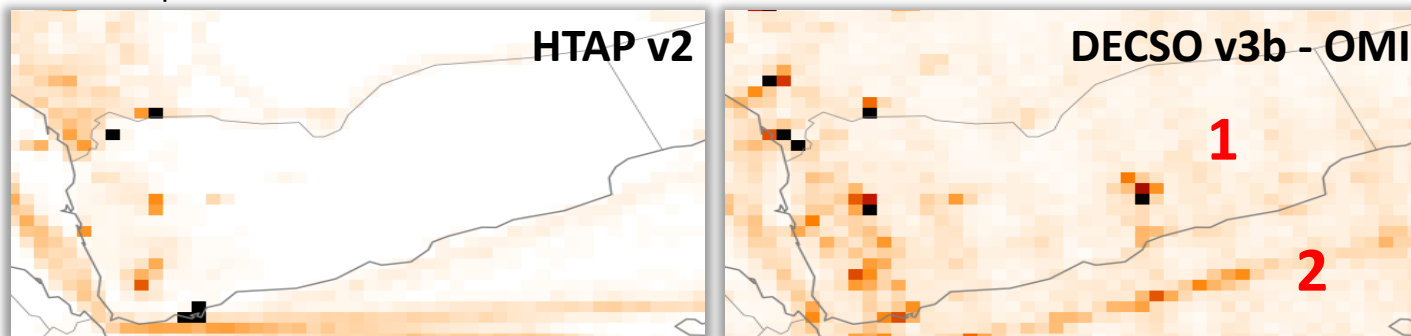

Evaluate the current status and possible improvements from enhanced space-borne and in-situ observation scenarios for fossil CO<sub>2</sub> emissions quantification based on OSSEs and QND studies

- high-resolution inverse transport modelling of CO<sub>2</sub>
- high-resolution inverse transport modelling of CO<sub>2</sub> and co-emitted species (NO<sub>x</sub>)
- advanced carbon cycle-fossil fuel data assimilation systems

# WP3: Estimation of emissions uncertainties

Example: NOx emissions in Yemen

T3.1: Estimate biogenic fluxes and associated uncertainties from independent observations (MPG-BGC, by March 2019)

T3.2: Provide emission uncertainties & correlations from inventories and statistics – for global emission gridmaps of EDGAR (JRC, by March 2019)

T3.3: Explore the role of satellite observations of NOx for estimation of fossil CO2 emissions (KNMI, by September 2019)

T3.4: Conduct OSSEs with an inverse transport modelling system to establish inversion strategy (CEA-LSCE, by June 2020)

T3.5: Perform QND experiments with advanced data assimilation systems (CC-FF-DAS) to establish inversion strategy (LUND/iLab, by June 2020)

# Mapping human settlement

Classifying automatically urban areas (fraction and height) is an extremely complex task. Urban areas expand each year

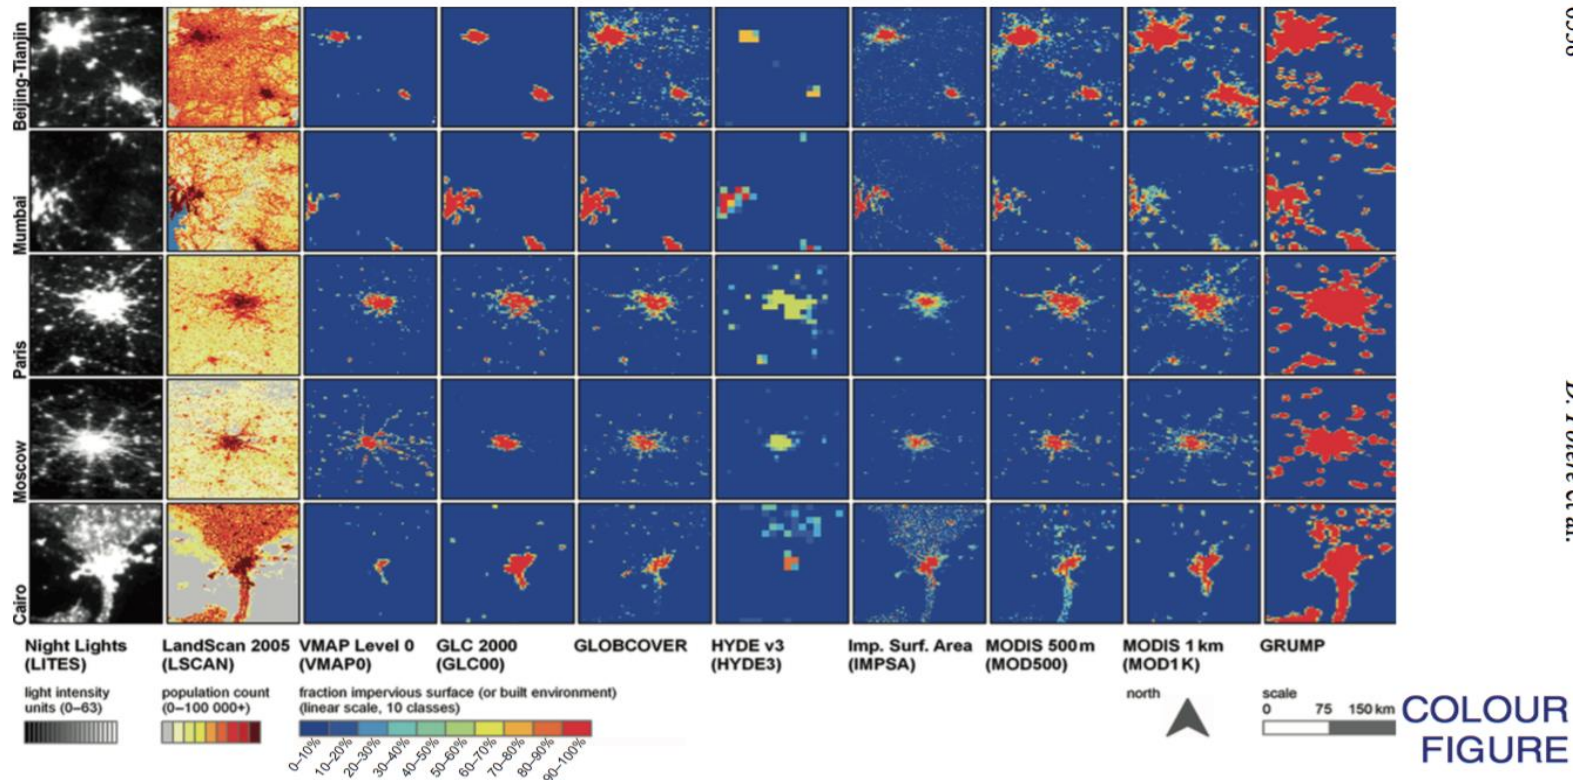

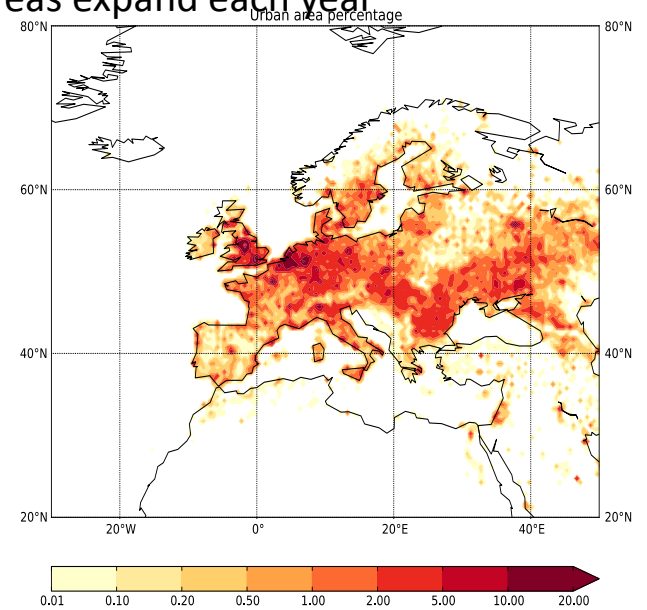

Figure 1. The eight global urban maps and two urban-related maps for Beijing-Tianjin, China (top row), Mumbai, India (second row), Paris, France (third row), Moscow, Russia (fourth row), and Cairo, Egypt (bottom row). LITES, LSCAN and IMPISA are at native 30 arc-second resolution, HYDE3 is at native 5 arc-minutes, and the remaining maps have been aggregated from 30 arc-seconds to 1.5 arc-minutes for display. This aggregation effectively converts their legends from binary (urban/rural) to continuous (percentage urban).

- Urban area (a, in %, from ECOCLIMAP Masson et al., 2003) see:

- Balsamo et al. 2014 ECMWF TM729

- Urban area dataset comparison on selected cities (Potere et al., 2009 IJRS) reveal large uncertainties and discrepancies

# WP4: Attributing CO<sub>2</sub> emissions from in-situ measurements

Lead: Frédéric Chevallier, Julia Marshall

Participants: CMCC, CEA-LSCE, EMPA, MPG-BGC, NILU, TNO, UEA, ULUND

1. Explore the practical implications of distinguishing between anthropogenic (meaning fossil fuel emissions, and also non-fossil waste burning, biofuels, etc.) vs. biogenic CO<sub>2</sub> fluxes.
2. Optimization of the space-time sampling of <sup>14</sup>CO<sub>2</sub>, CO and APO.

T4.1 High-resolution scenarios of CO<sub>2</sub> and CO emissions (Lead: TNO, M1-M12)

T4.2 Attribution Problem (Lead MPG:, M1-M33)

T4.3 Practical Recommendations (Lead: CEA, M25-M36)

## Outcomes

Survey current European in-situ observation capacity.

Define an operational strategy to separate anthropogenic CO<sub>2</sub> emissions from biogenic fluxes at regional and global scales through the use of additional tracers.

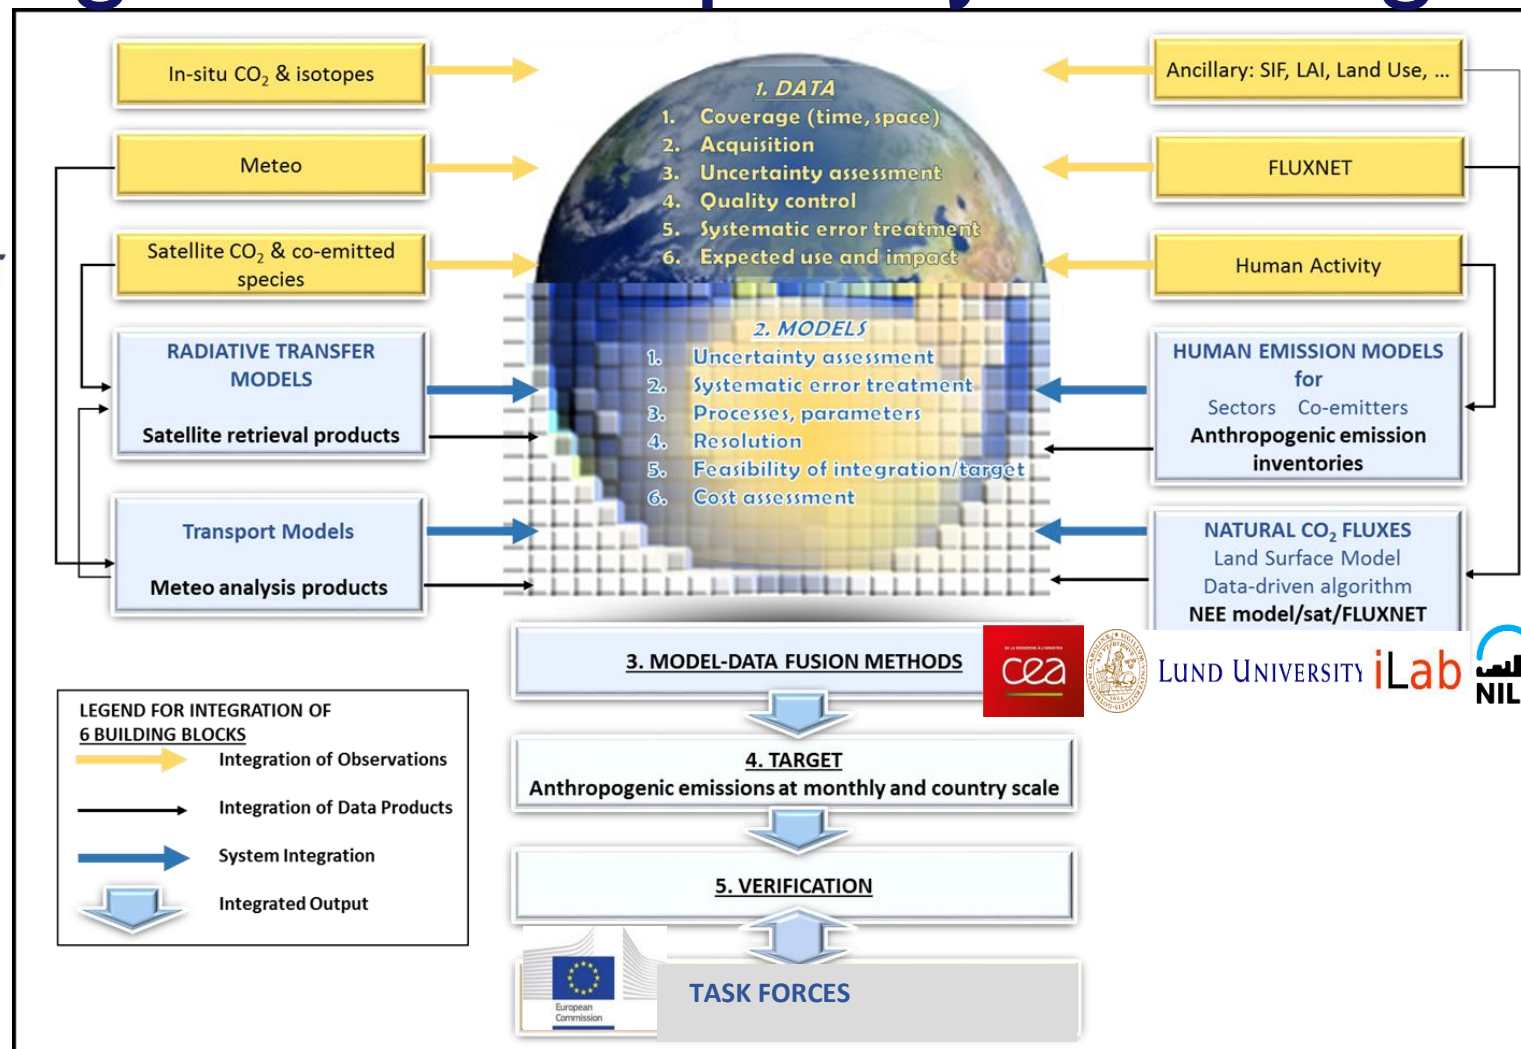

Shape the appropriate dimension and distribution of the corresponding in-situ network.

CO<sub>2</sub> HUMAN EMISSIONS

# CHE linkage with mapping & Weather

- Urban areas are important for the accurate prediction of extreme events such as heatwaves and urban flooding and need to be represented in ECMWF model.
- Best and Grimmond (2015) suggested that simple models may be well adapted to global applications
- Users lives urban areas and look at the forecast for urban locations.
- Urban maps combined with emission factors can provide CO<sub>2</sub> anthropogenic fluxes

- Urban area (a, in %, from ECOCLIMAP, Masson et al., 2003)

CO<sub>2</sub> HUMAN EMISSIONS
